Management's Discussion of Fund Performance

SUMMARY OF RESULTS

Over the trailing twelve-month period ending April 30, 2025, the Polen Opportunistic High Yield Fund's Institutional share class (DDJCX) returned 5.93% net of fees, compared to 8.69% for the ICE BofA U.S. High Yield Index (the “Index”).

TOP CONTRIBUTORS TO PERFORMANCE

- The Fund's income advantage relative to the Index contributed positively to relative performance for the period.
- The Fund's overweight to CCC-rated debt had a beneficial sector allocation effect, which helped relative performance as compared to the Index.
- Sector allocation was further supported by the Fund's underweight position in the Energy sector.
- On an absolute basis, HUB International and Aveanna Healthcare were the Fund's top performers during the period.

TOP DETRACTORS TO PERFORMANCE

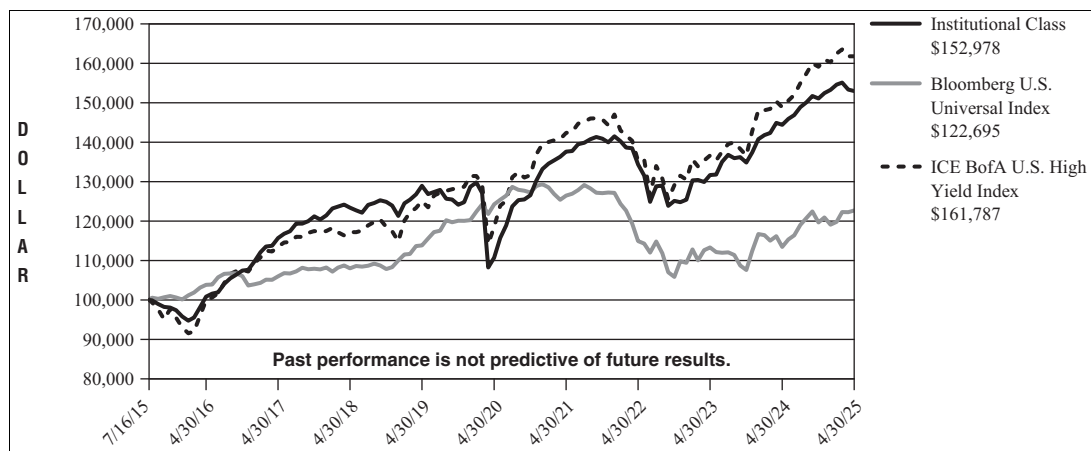

- The Fund's shorter duration relative to the Index detracted from relative performance, particularly as U.S. Treasury yields declined during the period.
- Although the overweight to CCC-rated debt was positive from an allocation perspective, the Fund's actual CCC-rated holdings lagged those of the Index and detracted from returns.
- Fund performance was also negatively affected by holdings in the Capital Goods, Media, and Transportation sectors, which underperformed their respective Index sectors.
- OnTrac (formerly LaserShip) and Dexko Global were the largest absolute detractors over the period.

Fund Performance

The following is a comparison of the change in value of a \$100,000 investment in Polen Opportunistic High Yield Fund's Institutional Class vs. the Bloomberg U.S. Universal Index and the ICE BofA U.S. High Yield Index.

GROWTH OF \$100,000

For the period July 16, 2015* through April 30, 2025

Average Annual Total Returns	1 Year	5 Years	Since inception
